LASERTEX

*6kW Lasertex CO₂
Laser Cutter*

With all the advanced technology we designed into the 6kW Lasertex Series of cutting machines, we made sure to keep one rock solid feature: reliability. These machines are designed for years of dependable processing—with productivity that can boost your capacity while cutting costs.

The Lasertex Series uses high-speed common-line cutting, which reduces cycle time 20%–30% and lowers remnant scrap costs by 1%–5%. The resonator is installed on the cross carriage, making the machine extendable on both the x and y axes. Their ability to operate unmanned lets you run

them during night shifts and weekends, slashing labor and energy costs. They have the capability to cut various shapes of holes without changing cutting tools. And highly accurate, dross-free cutting eliminates the need for secondary cleaning. Available with bevel cutting. Available also in 2kW and 4kW.

Find out how the Lasertex Series can improve your production and expand your business. Give Koike Aronson call at 800-252-5232.
