

Koike's new Water Table cuts operating costs. (And we're not blowing smoke.)

The new Water Table from Koike Aronson can cost up to 40% less to operate than a downdraft table with a fume collector. That can mean big savings in your metal cutting operations.

A water table isn't suitable for some processes but if you're cutting mild steel up to 6 inches thick, a Koike Water Table can be a money saver. It's available in lengths of 10 ft. to 40 ft. and widths of 5 ft. to 12 ft. (Custom sizes are also available.) The manual water valve operation is simple and the slag pans are easily cleaned.

Give Koike Aronson a call and find out how much a new Water Table can trim your operating costs.

Removable "S"-style slats for maximum plate support and slat longevity.

Easy operation of manual control valves for raising and lowering water level.
