

TR Series

Powered Fit-up Rolls

Models from 30 Ton to 1,200 Ton

Koike Aronson, Inc./ Ransome's Powered Fit-up station provides a easy economical way to fit up long vessels with multiple sections. With Individual powered adjustment for each wheel, under load, the sections can be moved left, right, up or down to be aligned to the next section. The addition of a manual or powered car allows the section to then be butted to the next for tacking. Once tacked, a powered drive roll sized to rotate the entire vessel is used for final weld-out.

Rubber and steel wheeled models available
